## WHAT IS IT?

Corona is a large group of viruses which can infect both humans and animals with cold-related diseases. The intensity of the infection ranges from common colds to acute respiratory syndrome.

However, the new strain of Coronavirus called 2019-nCoV is a novel virus to humans. So the information related to the disease including symptoms and means of treatment is limited.

The MOPH, in cooperation with WHO and international experts are working to combat the virus.
